

Apifit

Natural food supplement for stronger and healthier bees

Only natural ingredients

Apifit is used to strengthen beehives during spring development, as summer feeding supplement during the dearth of nectar as well as a preparation for winter. Bees love Apifit because it is a perfect mixture of various natural essential oils, plant polyphenols, sucrose and purified water.

Benefits:

- improves disease resistance of the beehive
- calms the bees when you are working them
- helps control Varroa mites
- stimulates the queen to start laying in the spring
- facilitates acceptance when introducing a new queen to a beehive

How to use:

Apply Apifit per beehive in one of three possible ways:

1. In sugar syrup: add 5 ml of Apifit in 1000 ml of sugar syrup (in 1:1 ratio),
2. In pollen patty: add 10 ml of Apifit per 1000 g of patty,
3. By spraying: add 5 ml of Apifit in 200 ml of sugar syrup and spray the bees in the hive with it.

Repeat the treatment several times a year.

For the best result:

As a preventive method or once nosemosis is noticed in the beehive, our product Nozevit should be added to Apifit treatment.

Available sizes: 200 ml, 500 ml, 1000 ml.
